OMPASS

REST API -

Initializing
OMPASS Registration

Content

What is Initializing OMPASS Registration?

If the user loses or changes the authentication device such as a smartphone, this function will help you to initialize the user's existing OMPASS registration and enable OMPASS registration again on new device.

You can use the "API for Initializing OMPASS Registration" to initialize the user's registered information.

API for Initializing OMPASS Registration

From the server-side

Call OMPASS API including the secret key in "HTTP HEADER" and the user ID in "Path Variable" from the server-side.

■ API for Initializing OMPASS Registration
